

Petrovax Pharm is a Russian full-cycle biotechnological company with 25 years of successful market experience.

The product portfolio includes its original drugs and vaccines, as well as contract medicines and food supplements.

The company has a research center and holds patents for new molecules and pharmaceutical manufacturing technologies in Russia and abroad. The company's investment program provides the financing of advanced R&D projects.

The modern manufacturing complex for substance and finished dosage forms production located in Moscow Region operates in full compliance with the EAEU and EU GMP standards. The production capacity provides for manufacturing more than 160 million doses of immunobiological products per year. For ten years, the company has successfully confirmed compliance with the GMP EU certificate (Slovakia), which was first obtained in 2012.

Petrovax is one of the largest Russian exporters of influenza vaccines and original pharmaceutical products, which are presented in the EAEU and EU countries. Petrovax is the partner of Big Pharma companies: Pfizer, Abbott, Boehringer Ingelheim, ISU ABXIS, Adimmune.

The company's investment strategy is aimed at investigation, production development and import substitution of medicines and vaccines used in the treatment of socially significant conditions, such as oncological, autoimmune, infectious, and orphan diseases.

Petrovax has over 700 employees.

Our mission: «Innovative products for health and better quality of life».
